

What will humans do when machines do it all?

People vs technology is the battle of tomorrow's employment landscape with predictions of 500,000 jobs being transferred from humans to machines within the next decade in Australia.

We have already seen routine jobs like bank tellers, cashiers, assembly workers and others lose their jobs in favour of machines. Next to go are the routine white-collar jobs including those from within the real estate, legal and financial industries.

In this new work-space the majority of us will be working when and where it's appropriate rather than a mandated 9-5; the weekend and 4 weeks holidays will be antiquated notions and instead we will work and live fluid lives with no clear boundaries, each overlapping the other as and when "life" happens. >

This one's straight from the pages of the media and a topic that I got asked so often in 2015 to speak about on-air and in Board Rooms that this year it's evolved to become its own keynote and workshop.

In this timely relevant piece I expose the jobs and industries that are dying and the new ones rising to take their place; explore the future of our workforce; emerging non-traditional work models; show you how to tap into the vast contingent global talent pool, how to attract and keep talent in a digital age; what the role of a transhumanist HR person will be and why you'll need one and how to effectively lead a future physical – digital workforce that operates across space, time, culture and norms.

an exploration of the how, why, where and when of tomorrow's workplaces, people and machines.

also available as a workshop.

In this evolving new world we will have a physical world with all its old legacy ways of doing and having things; a brand new digital world barely out of its infancy and still to show its true adult potential; robots, drones and androids marching confidently over the hill; rapidly changing cultures and habits; burgeoning connected and intelligent technologies; increasing populations; decreasing jobs and ever-growing human desires all mixed together and simmering in a large pot called the future.

Take a look at these new life, job and work frontiers; uncover the jobs and industries that will flourish in the future and those that will disappear; check out the workspace and workforce of tomorrow; explore digital HR and how tomorrow's leaders will inspire and manage a dynamic diverse tribe beyond time zones, language and geography and answer the question of what humans will do when machines are busy doing everything.

Who's it for?

People leaders, Human Resource, C-Suite, Directors, Middle to Senior Leadership Managers, Teams, Strategists who want to explore, map and plan for their people (r)evolution and future workplace

The Inquisitive – who need to know how humans and technology will co-exist in tomorrow's workplace and who will be doing what, where, when and with whom/what. **FCI**
